3 BACKGROUND

Chemical Pathology/Satellite/Haematology/Coagulation/Serology: The automated systems at Chris Hani Baragwanath Academic Hospital(CHBAH) have reached the end of the contract and are due for replacement. The advantages of total automation, including the pre-analytical automation and analysers, are as follows: Reduction in pre-analytical errors, standardisation, quality improvement, removal of many manual steps, automated repeat and reflex testing, improved specimen tracking, improved turnaround time, increase throughput, improved efficiency, increase in productivity, improvement in safety and reduction in overall cost. The challenges with ageing instruments include but are not limited to deteriorating analytical performance, frequent downtimes due to breakdowns and increased costs due to the replacement of parts. All of these have an adverse impact on workflow and turnaround time and lead to our customers' overall loss of confidence.

In addition, after five years with the existing system, it seems pertinent to update the system based on potentially new technologies and improvements to the automation platform and analysers, as well as improved assay performances due to kit enhancements.

4 SCOPE OF WORK

Chemistry: Fully Automated Track system with a pre-analytical module for online Centrifugation, sorting and aliquotting, Middleware and Inventory system. Analysers should accommodate Chemistry, Endocrinology, and Immunology, and provide an online refrigerated Storage Facility. In addition, the contract should include and support a standalone chemistry and endocrine analyser for operations at the Satellite laboratory similar to the Main Chemistry lab platform.

Haematology: 1. A fully automated haematology analyzer with slide maker stainer track system with a storage facility and middleware software to incorporate laboratory customized full blood count and differential reporting rules. The haematology analyzer must be able to accommodate the full existing test volume and repertoire (see test list attached). The test repertoire being a full blood count +differential count +Reticulocyte count. 2. A fully automated standalone ESR analyser. The Analyser must be able to accommodate both paediatric and adult EDTA tubes.

Coagulation: Three fully automated Coagulation analysers with cap piercing capability that must be able to accommodate the full existing test volume and repertoire (see test list attached).

Serology: Two different technology Serology analysers to cover the test volume and repertoire.
