3 BACKGROUND

The Chemistry Analyser in National Health Laboratory Service is a primary analyser required to run and provide a clinical laboratory service. This analyser is used 24/7 in response to the needs of the clients. For optimal and efficient utilization, these analysers should be current in terms of technology and age. The contracts for these analysers have expired and are on month to month contract. The current analysers were placed between 4 and 8 years ago. They do not cope with the workload and often breakdown due to low capacity. Extended downtime affects our ability to provide uninterrupted service. This leads to customer dissatisfaction and loss of confidence in our ability to provide services. TAT is also very long in labs with semi-automated analysers which are over 8 years old. This often leads to excessive overtime that can be prevented if the analysers were of adequate capacity and fully automated.

4 SCOPE OF WORK
